# Foreword

THE Jones County Agricultural High School began its third session on September 8th, 1913, with the largest enrollment in the history of the school. Within a week after opening every room in the dormitories was taken and the class rooms all over-flowing. The school has met a popular need and for this reason, succeeded from the first. For the first year the total enrollment was about eighty-five pupils; for the second year it was about one hundred fifty; and for the third year it is about one hundred eighty. Over one hundred of the pupils this year are boarders, coming from all parts of Jones and the adjoining counties.

In proportion with the increase in attendance the school has grown in equipment and teaching force. Within the last year a modern home science building has been erected and equipped. In this building is a large sewing room, a cooking laboratory, a kitchen, dining room, living room, and bed room. It is designed as a place to teach our girls sewing, cooking, and home making. Another important feature added within the last year is the Manual Training department. This apartment is equipped with modern work benches and tools. Every boy in school takes this work and learns how to do things with his hands. When these boys get back on the farm they will know how to keep things in a good state of repair and how to plan and build simple farm buildings.

The teaching force of the school has grown from three

teachers in 1911 to seven teachers at the present time. Every one of these teachers hold college degrees from the best colleges in the South and most of them have had several years experience in teaching.

The purpose of the Jones County Agricultural High School is two fold. First, it strives to give every boy and girl in Jones County a thorough and practical high school education, which will not only fit them for college and teaching, but will also fit them for life on the farm. And it gives this education at such a small cost that any boy or girl, however poor, can take advantage of it. Second, the school is striving in every way possible to help the farmers of the county who are too old to attend school. It is doing this by holding farm schools and institutes, vaccinating hogs, doctoring sick stock, building silos, and working out rations for live stock for the farmers. Any farmer who wants help in such matters as these can have it for the asking.

---

# Location

The Jones County Agricultural High School is located at Ellisville, the county seat of Jones County. Ellisville is one of the oldest and best known towns in south Mississippi. It is centrally located, being about 125 miles north of New Orleans, 65 miles south of Meridian, within twenty miles of Hattiesburg, and 7 miles of Laurel. Both the N. O. & N. E. and the N. O. M. & C. Railroads enter the town, and an electric car line is in operation between Ellisville and Laurel. The general health of the town is almost unsurpassed. The water supply for the school comes from a well 300 feet in depth and is bountiful and pure.

The people of the town are noted for their generosity and hospitality, and they do every thing in their power to make the school a success and the lives of the students pleasant and profitable. Ellisville has three churches, Presbyterian, Baptist and Methodist, all with good Sunday Schools. Most of our students are enrolled in these Sunday Schools and are required to attend the church of their choice every Sunday.

Home Science Building

# Buildings and Equipment

The school is excellently equipped for fine work. We have a large modern brick dormitory which will accommodate seventy-five boys. The girl's dormitory, also a brick building, will accommodate thirty girls. This building will be enlarged and rearranged so as to accommodate more pupils for the coming session. On the first floor of this building is a large kitchen and dining room. The dining room will seat over one hundred people. The school owns a forty-acre farm, which is under the supervision of the farm director. The boys do all the work on the farm, and in this way get practical training. They learn in the class rooms what are the best things to do, and then go out on the farm and learn how to do these things by doing them. The farm owns two brood mares, two colts, several high grade hogs, six cows and one bull. The boys have the care of this live stock, and under the instruction of a trained instructor, learn how such live stock should be fed and managed for the best results. The farm is equipped with modern machinery, a good barn, a silo and cow shed.

The land owned by the school was very poor and run down when first taken over, but has been greatly improved within the last two years. It has been stumped, terraced and ditched, and soil improving crops have been planted on every acre every year. Last year about 2000 lbs. of hog meat, 200 bushels of corn, 250 bushels of sweet potatoes, 30 tons of silage, 15 tons of hay, 100 gallons syrup, and 2500 gallons of sweet milk were produced on the farm, besides a good garden and soil improving crops. From present prospects a much better crop will be raised this year.

Before the next session begins the school is planning to put in several improvements. Chief among these will be a large brick academic building. This building will contain six good class rooms, a library room, auditorium, and offices. The auditorium will seat three or four hundred people. The school is also planning to put in a poultry department and some more pure bred live stock.

Dining Hall

# General Information

The next session will begin on Tuesday, September 8th, 1914, and it is urged that every boy and girl who expects to enter school for the session will inform the principal of this intention by August 15th. It is very important that this be done by this time, so that rooms and accommodations can be reserved. We believe that the school will be crowded, and we want to prepare to give every student the very best accommodations possible. The opening day of school will be given over to matriculation and registration. On entering school you are urged to go directly to the principal's office, where you will be registered and assigned to your room. Boys attending school will be directly under the charge of the Principal and his assistants. Girls will be in a separate building and under the care of a competent matron and other lady teachers. The school will be the children's home and every home like influence will be thrown around them at all times.

The pupils will be allowed to go home on Saturday and Sunday at stated intervals, but only by written permission from their parents directly to the Principal of the school. We encourage right living and a high moral tone at all times.

Each student on entering school is required to sign the following pledge: "I do promise on honor that while I am a student of the Jones County Agricultural High School not to have in my possession any kind of fire arms, (except those issued to Military company by the school), not to drink or bring on campus or in school any form of intoxicating drink, and not to leave school limits without permission from proper authority."

# Expenses

No tuition will be charged to students from Jones County. Pupils from other counties will be charged at the

Manual Training Department

very low rate of $2.50 per month, or $20.00 per year, if paid in advance.

Rooms in dormitory are free to all. The rooms are equipped with a bed, washstand, bureau, table and chairs, bowl and pitcher, broom, etc. The only things students will be required to bring from home are pillows, bed clothing and towels. The rooms are steam heated, electric lighted and well ventilated. A small Matriculation Fee of $2.00 will be charged every student on entering school. This will be used for Lyceum Course, Library, etc. The only other expenses to the pupil will be for books and board. Board in the dormitory shall be given at actual cost, which, during the last session, ranged from $6.00 to $7.00 per month. We don't believe that board will exceed $7.00 per month for the coming session. Deserving students will be given work whenever possible, and they can pay a part of their board in this way. The work will be divided as equally as possible among the pupils needing it.

Board will be required to be paid one month in advance. On entering school $8.00 must be deposited by each boarding pupil for the first month's board. If at any time a pupil has to stop school, the money paid in advance will be refunded.

## Entrance Requirements

All pupils who have completed the seventh grade work in the public schools can enter the Agricultural High School without taking examination. Those who have not completed the seventh grade will have to take examination on this work before entering. These examinations will be given on the first day of school.

## Course of Study

The course of study covers four full high school years and is the course adopted for the agricultural high schools of this state.

## First Year

| | Periods per Week |
|---|---|
| High School English Grammar | 5 |
| Advanced Arithmetic | 5 |
| Spelling | 2 |
| Elementary Botany | 3 |
| Sanitation and Hygiene | 2 |
| Agriculture | 5 |
| Home Science (for girls) | 5 |
| Manual Training (for boys) | 5 |

## Second Year

| | |
|---|---|
| Algebra | 5 |
| Composition and Rhetoric | 5 |
| Ancient History | 5 |
| Zoology | 3 |
| Chemistry | 2 |
| Agriculture | 5 |
| Home Science (for girls) | 5 |
| Manual Training (for boys) | 5 |

## Third Year

| | |
|---|---|
| Composition and Rhetoric | 2 |
| English Literature, with Classics | 3 |
| Algebra and Plane Geometry | 5 |
| Modern History | 5 |
| Chemistry and Physics | 5 |
| Agriculture (for boys) | 5 |
| Home Science (for girls | 5 |

## Fourth Year

| | |
|---|---|
| American Literature with Classics | 5 |
| Solid Geometry | 5 |
| American History and Civil Government | 5 |
| Agriculture (for boys); Garden Making (for girls) | 5 |
| Electives | 5 |

Two periods per week of practical work on the farm will be required of all boys in all classes. This course of study is designed to give the pupils completing it a strong industrial education and a thorough training in the high

A Class in Home Science

school literary subjects. A synopsis of the work covered in the various subjects is given below.

## Agriculture

The first year's work in agriculture will include Warren's Elements of Agriculture and bulletin work. It will be our purpose to give the pupils taking this work a general idea of the subject in all of its phases. The second year's work will be devoted to a detail study of the soils of the County and the crops of the State. The third year will be given over to a study of the breeds of live stock, including the feeding, breeding and care of the farm animals and the subject of dairying. In the fourth year we take up a brief study of farm management, farm book-keeping, farm surveying and marketing crops. In each year practical work is given along with the study of the text book. The boys are taught to know and to handle good live stock, good farm implements, etc.

## Science

In order to have a thorough understanding of the science of agriculture the student must know something about Botany, Chemistry, Physics, and the related sciences; therefore, we make our course in science stronger than in most high schools. In the first year we take up structural Botany, and the identification of plants and weeds of this section. The first half of the second year is given to the study of zoology, with special reference to the habits of insects and animals which are helpful and those which are injurious to man. The latter half of the second year we take up chemistry, and continue this study until the second term of the third year. In chemistry we study the composition of soils and fertilizers, the value of fresh air and sanitation, the composition of various spray mixtures and other simple compounds. In this year we take up Elementary Physics, and devote two terms to this subject.

Girl's Basketball Team

## History

To strengthen the cultural side of our course of study, we give three year's work to history; Ancient History the second year; Modern History the third year; and American History and Advanced Civil Government the fourth year. Two year's work in one of the modern languages may be elected in place of two years of the history.

## Mathematics

The first year's work in Mathematics includes the study of Colaws & Elwood's Advanced Arithmetic, beginning at fractions and finishing the text, with Introductory Algebra, and special emphasis given to farm problems. In the second year, Milne's High School Algebra is studied as far as quadratics. The third year's work continues the study of quadratics and advanced Algebra for the first term. The next two terms of the session are devoted to the study of Wentworth's Plane Geometry. The fourth year completes Solid Geometry and take Elementary Trigenometry, the latter given with special reference to farm surveying.

## English

The first year's work in Engilsh embraces a thorough study of the entire text, Prince's Practical English Grammar. In the second year, Composition and Rhetoric is taken four periods, and some Classic one period each week for the entire session. This course is designed to give a knowledge of the principles governing effective composition; to create a desire for reading, and some ability to appreciate good literature, and to teach clearness and correctness of expression. The work consists of recitations from Brook's Composition and Rhetoric, and from classics, and numerous written exercises in paragraph writing and in the various forms of composition. Halleck's History of English Literature is studied with English Classics in the third year, while the fourth year takes Halleck's History of American Literature with American Classics. In addition, both third year and fourth year classes are given work in advanced theme writing.

Company B., A. H. S. Riflemen

# Domestic Science

The course of Home Science is planned to give the girls of Jones County an intelligent appreciation of home-making as an art, as well as proficiency in the performance of the ordinary household activities. The work of the first year includes the elementary kinds of cooking and sewing. The girls who live in the dormitory make their own uniforms and all girls make their laboratory aprons that are used in cooking classes. In the making of these garments the simpler stitches and the use of the machine is taught. The cooking course for the first year is a study of food principles with illustrative laboratory work. The students of the second year have a more detailed study of food principles, and the combination of foods into a balanced menu is given careful attention. Household sanitation, house-cleaning and a continuation of the sewing begun in the first year are also given definite attention.

The third year's work continues the study of house planning, furnishing and sanitation. Every girl is expected to take a part in the care of the home science house in which the work of this department is carried on. Each senior student is required to show that she is able to plan, prepare and serve a complete meal. Home sick-nursing and special diets are given a place in this fourth year's work. The study of normal diet and a balanced ration is re-emphasized and impressed in this course.

# Manual Training

The Manual Training Department is equipped with modern work benches and tools. Within the next year we hope to put in a small forge, a planer, a band saw and one or two lathes. The object of this course is to teach the boys who take it how to use tools, build ordinary farm buildings, repair farm machinery, and keep everything around the farm in a good state of repair. Every student takes this work four hours per week for two years.

Boys Basketball Team

## Music

The school owns a good piano, and all pupils who want to take music can do so here in school at a reasonable rate. We have an excellent teacher who gives daily lessons in music to those who want it.

## Organizations

Believing that a certain amount of recreation and exercise is necessary for the best development of students, we encourage our students in these things. Among the organizations in school is a literary society, two military companies and several athletic teams.

## Athletics

All forms of clean athletic sports are encouraged by the management of the school. The athletic teams have been very successful in the last year. The boys basket ball team won the championship of the State last season, and have not lost a single game so far this season. The girl's basket ball team won several games from representative high schools and colleges last year. The base ball and track teams were also among the best in the State last year and the outlook is bright for better teams this season.

The athletic teams of the school are directly in charge of the faculty and no pupil is allowed to play in games unless he does satisfactory class work. We believe that the right kind of athletics is one of the best methods of promoting health and school spirit. Below are given the names of the managers and captains

| Teams | Captain | Manager |
|---|---|---|
| Boy's Basketball | Tom Overstreet | Myrl Jordan |
| Girl's Basketball | Leffie Herrington | Corine Moore |
| Base Ball | Tom Overstreet | Peron Lewis |
| Track | Floyd Jordan | Dayton Crosby |

Hubbard Guard

# Literary Society

The Literary Society has done better work this year than ever before in the history of the school. Regular meetings every two weeks are held and interesting programs are rendered. This is one of the best features of the school, as it teaches the boys and girls how to speak without embarrassment and how to use the English language correctly. The officers of the society for the first two terms of this year are given below.

| Officers | First Term | Second Term |
|---|---|---|
| President | Richard Hutcheson | Ben Hilbun |
| Vice-President | Tom Overstreet | Dayton Crosby |
| Secretary | Eulalie Welborn | Verda Knight |
| Censor | Henry Boutwell | Delma Windham |

# Military Companies

The school has two military companies, known as Hubbard Guards and A. H. S. Riflemen. Each company is an independent student organization having its own constitution and by-laws, electing its own officers, but under the supervision of an instructor from the Faculty. The rifles used are supplied by the school and the uniforms are furnished by the individual members of the companies. These companies have regular drills twice a week. The military drills and discipline teach the boys to respect authority, to obey orders promptly and to carry themselves erect at all times.

# NITRATE OF SODA

When buying fertilizers do not forget to consider its contents in plant food as well as its availability. Nitrate of Soda is the **most available** and from it Nitrogen can be bought for less money than from most any source. Nitrate of Soda will not take the place of rain, sunshine, cultivation or common-sense, but it is the cheapest and best source of nitrogen on the market.

# Let The Store Accomodating Serve You

The spirit of our advertising is the practice of the store and the practice of the store is **courtesy.**

**Courtesy** is an asset to the individual—

**Courtesy** is an asset to a business—

**Courtesy** is a particular asset to the business of The Davidson Dry Goods Co.

This business lives and grows day by day in the midst of keen competition. If this service was not right, people would not come the second time.

Every day we hear comparisons highly complimentary to the service of The Davidson Dry Goods Co's Store, where good service, courteous and helpful salesfolk is the rule rather than the exception. Better today than it was six months ago. It will be still better a year from now.

We want, however, our service criticised—our managers will give you ready audience to discuss any experience that you may have had at the store.

Visitors are Always Welcome
